AiSearch 插件的使用手册

Bootstrap jQuery CSS

AiSearch 是通过后台对字段指定类型,将字段与字段类型传输到前端,前端对字段类型进行判 断,从而绑定相应的控件,然后用户录入信息,将信息以FormData对象的形式传递。需绑定以下 控件:

• 普通文本框

• 日期控件: Laydate [2018版, 系统为旧版]

• 多选下拉框: chosen-select

• 分类树: zTree

AiSearch 插件的使用手册

- 1. 使用方法
- 2.关于插件的配置项代码详解
- 3. 效果演示
- 4. 注意事项
- 5. 反馈与建议

1. 使用方法

1. 在 include.html 公共文件中引入 CSS 文件

```
<link href="/css/AiSearch.css" th:href="@{/css/AiSearch.css}" rel="styl</pre>
esheet">
```

2. 在 include.html 公共文件中引入 JS 文件

```
<!-- AiSearch -->
<script type="text/javascript" src="../js/AiSearch.js" th:src="@{/js/Ai</pre>
Search.js}"></script>
```

3. 调用方法

```
<!-- AiSearch -->
$('.ibox-body').AiSearch(); // 指定元素,便可在其内部起始位置添加搜索插件
```

2.关于插件的配置项代码详解

```
* @Description: 基于 Bootstrap 的高级搜索

                            laydate.render({
                                  elem: '.input-date',
                            });
                        }else if(pick == 'eqState'){
                            var select = '<div class="col-sm-3"><label class="col-sm-</pre>
4 control-label" data-code='+pick+'>'+pickName+': </label><div class="col-sm-8 input-
delete"><select data-placeholder="选择搜索类别" class="chosen-select form-control chose
s" multiple><option value="1">1</option><option value="2">2</option></select><div cla
ss="mybtn btn-minus"><i class="fa fa-minus" aria-hidden="true"></i></div></div></div
                            $('.search-box .form-group').append(select);
                            $(".choses").chosen();
                             var input = '<div class="col-sm-3"><label class="col-sm-</pre>
4 control-label" data-code='+pick+'>'+pickName+': </label><div class="col-sm-8 input-
delete"><input class="form-control" type="text"><div class="mybtn btn-minus"><i class
="fa fa-minus" aria-hidden="true"></i></div></div></div>';
                            $('.search-box .form-group').append(input);
                });
                $('.search-box').on('click','.btn-minus',function(){
                    $(this).parent().remove();
                });
                // 提交数据
                $('#submit-btn').click(function(){
```

```
var formData = {};
                    var inputNum = $('.form-horizontal label').length;
                    for(var i=0;i<inputNum;i++){</pre>
                        formData['ncr['+i+'].field'] = $('.form-horizontal label').da
ta('code');
                        if(type = "input"){
                            formData['ncr['+i+'].inner'] = $('.form-horizontal .input
-delete').eq(i).children().val();
                        }else if(type = "select"){
                            var myStr = $('.form-horizontal .input-delete').eq(i).chi
ldren().val().join("-");
                            formData['ncr['+i+'].inner'] = myStr;
                        }else if(type = "sort"){
                            var myStr2 = $('.form-horizontal .input-delete').eq(i).ch
ildren().val().split(",").join("-");
                            formData['ncr['+i+'].inner'] = $('.form-horizontal
input').val();
                });
                // 重置数据
                $('#reset-btn').click(function(){
                    $('.form-horizontal .input-delete').children().val('');
                    $('.form-horizontal .chosen-select').val('');
                    $('.form-horizontal .chosen-select').trigger('chosen:updated');
   });
})(jQuery);
```

3. 效果演示

4. 注意事项

- 日期 Laydate 已更新至 2018 版本, 系统内 2014 版需更新
- 在 typeTree.js 中添加 parent.treeVal 让分类树绑定对应的文本框,所选值投射到文本框中

```
$('#typeTree').on("changed.jstree", function(e, data) {
    if(data.node.id!=-1){
        parent.loadEqType(parent.treeVal,data.node.id,data.node.text);
        var index = parent.layer.getFrameIndex(window.name); // 获取窗口索引
        parent.layer.close(index);
    }
});
```

• 该插件仅适用于本项目,同时还不够完善,仍有诸多要与后台人员搭配的内容,大家有相关问题可与我积极讨论。
