AiSearch 插件的使用手册 v1.0

□ 文档编辑 Bootstrap jQuery CSS

AiSearch 是通过后台对字段指定类型,将字段与字段类型传输到前端,前端对字段类型进行判断,从而绑定相 应的控件,然后用户录入信息,将信息以FormData json对象的形式传递。需绑定以下控件:

- **普通文本框**:标识符「input」
- 日期控件:标识符「date」,更新 Laydate 插件「2018版,系统为2014旧版」,调用 Laydate 的方法变 化,具体可访问官网

```
<script>
laydate.render({
 elem: '#test1' //指定元素
});
```

- 多选下拉框:标识符「select」, chosen-select
- 分类树:标识符「tree」, zTree

AiSearch 插件的使用手册 v1.0

- 1. 使用方法
- 2.关于插件的配置项代码详解
- 3. 效果演示
- 4. 注意事项
- 5. 反馈与建议

1. 使用方法

1. 在 include.html 公共文件中引入 CSS 文件

```
<link href="/css/AiSearch.css" th:href="@{/css/AiSearch.css}" rel="styl</pre>
esheet">
```

2. 在 include.html 公共文件中引入 JS 文件

```
<script type="text/javascript" src="../js/AiSearch.js" th:src="@{/js/Ai</pre>
Search.js}"></script>
```

3. 调用方法 将此 JS 文件置于末尾

```
<!-- AiSearch -->
$('.ibox-body').AiSearch(); // 指定元素,便可在其内部起始位置添加搜索插件
```

2.关于插件的配置项代码详解

```

s="col-sm-8 input-delete"><input class="form-control" type="text"><div class="mybtn b
tn-minus"><i class="fa fa-minus" aria-hidden="true"></i></div></div></div></div></</pre>
                            $('.search-box .form-group').append(input);
                });
                $('.search-box').on('click','.btn-minus',function(){
                    $(this).parent().remove();
                });
                $('#submit-btn').click(function(){
                    var inputNum = $('.form-horizontal label').length;
                    for(var i=0;i<inputNum;i++){</pre>
                        var type = $('.form-horizontal label').eq(i).data('type');
                        var field = $('.form-horizontal label').eq(i).data('code');
                        if(type == 'input' || 'date'){
                            formData[field] = $('.form-horizontal .input-delete').eq
(i).children().val();
                        }else if(type == 'select'){
                            var myStr = $('.form-horizontal .input-delete').eq(i).chi
ldren().val().join("-");
                            formData[field] = myStr;
                        }else if(type == 'tree'){
                            var myStr2 = $('.form-horizontal .input-delete').eq(i).ch
ildren().val().split(",").join("-");
                            formData[field] = myStr2;
                    load(formData);
                    reLoad();
                });
                $('#reset-btn').click(function(){
                    $('.form-horizontal .input-delete').children().val('');
                    $('.form-horizontal .chosen-select').val('');
                    $('.form-horizontal .chosen-select').trigger('chosen:updated');
    });
})(jQuery);
```

3. 效果演示

4. 注意事项

- 日期 Laydate 已更新至 2018 版本,系统内 2014 版需更新
- 在 typeTree.js 中作对应修改相应的 JS 让分类树绑定对应的文本框,所选值投射到文本框中

```
<script type="text/javascript">
   $(document).ready(function() {
       getTreeData()
   });
   function getTreeData() {
       $.ajax({
           type : "GET",
           url : contpath+"equip/eqType/tree",
           success : function(tree) {
               loadTree(tree);
       });
   function loadTree(tree) {
       $('#typeTree').jstree({
            'core' : {
                'multiple': false, // 单选和复选
                'data' : tree
```

```
},
        'checkbox' : {
           "three_state": false // 父子级别级联选择
         },
       "plugins" : [ "search","checkbox"]
   });
   $('#typeTree').jstree().open_all();
$('#btn-tree').on('click',function(){
    var result = [];
   var checkedVal = $('#typeTree').jstree(true).get_checked([{full:true}]);
    for(var i = 0;i<checkedVal.length;i++){</pre>
       result.push({id:checkedVal[i].id,text:checkedVal[i].text});
   parent.loadEqType(parent.treeVal,result); // 捕获parent.treeVal,即点击的文本框
   var index = parent.layer.getFrameIndex(window.name); // 获取窗口索引
   parent.layer.close(index); //美闭窗口
});
```

• 该插件暂仅适用于本项目,同时还不够完善,仍有诸多要与后台人员配合的内容,大家有相关问题可与我积极讨论。
